For creation of bibliography:

Following are the commands to be used to auto generate the references from .bib file you generated.

\bibliographystyle{vancouver-modified}

\bibliography{sample-vancouver}% How to create the bib file is shown in sample-vancouver.bib file. This is just for reference.

- Use the \cite{...} command to create the cross reference within the chapters/book.
- After compiling the chapter/book, run the **bibtex** exe for the chapter/book you created (Eg: **bibtex chapter/book**).
- The bbl file will get auto generated once you run the bibtex exe file.

For creation of index:

Following are the commands to be used to auto generate the Index from the idx file you auto generated while compiling the tex file.

- Place the \index{...} tag for the terms you wish to tag.
- Compile the tex file
- Run the makeindex exe for the chapter/book you created (Eg: makeindex chapter/book)
- Ind file will get auto generated once you run the makeindex exe file.
